PREFACE

The Australian Standard Commodity Classification (ASCC) has been developed by the ABS to facilitate the compilation of comparable Australian production, import and export commodity statistics, to improve the comparability of Australian production commodity statistics with equivalent commodity statistics of other countries (compiled in accordance with international standard commodity classifications) and to provide a framework for the integration and standardisation of Australian commodity statistics generally.

The ASCC presents standard (i.e. ASCC) commodity items and relates them to equivalent items from the separate classifications of imported, exported and home produced commodities within an industrial origin structure. These standard ASCC items represent the most detailed common groupings of items from the existing separate classifications of locally produced, imported and exported commodities that could be devised to date. The industrial origin structural headings, under which the standard items are shown, are based on the industries in the 1978 edition of the Australian Standard Industrial Classification (ASIC).

The last published edition of the ASCC relates to the year 1978-79. A 1979-80 edition of the manual was not published because the comparatively few changes to the standard commodity items for 1979-80 did not warrant the cost involved in publishing the manual in its entirety. Instead a key entitled "Australian Standard Commodity Classification 1979-80 New and Revised Standard (ASCC) Items" which records the changes between the 1978-79 and 1979-80 editions of the ASCC has been made available on request.

This edition of the ASCC relates to the year 1980-81 and covers commodities originating in the Agriculture, Fishing, Mining and Manufacturing industries. Commodities originating in the Forestry and Hunting industries are not included in the ASCC for 1980-81 since production statistics for these industries are no longer collected by the Australian Bureau of Statistics (ABS).

The ASCC will continue to be subject to further development in the light of investigation of changes in production and trade. In subsequent editions more attention will be given to improving the classification in terms of the detail desired by users of statistics, its internal logical integrity and consistency with related international classifications (which also require revision from time to time).

~~term one.~~

The ASCC manual is composed of the following two parts:

PART 1 includes the Introduction; Broad Structure of the ASCC; Summary Classification; Production items keyed to standard (ASCC) items; Import (AICC) items keyed to Tariff Item Statistical Keys (TISK's) and standard (ASCC) items; Tariff Item Statistical Keys (TISK's) keyed to Import (AICC) and standard (ASCC) items; and Export (AECC) items keyed to standard (ASCC) items.

PART 2 includes the Detailed Classification.

This edition of the ASCC is the first to be published in loose leaf folders and provides the base copy for future editions. Revisions to the classification in the future will be issued in the form of replacement pages. Replacement pages for Part 1 of the classification will be issued free-of-charge to everyone who has received or purchased a copy until a complete reprinting of the classification becomes necessary.

INTRODUCTION

PURPOSE OF THE ASCC

1 The Australian Standard Commodity Classification (ASCC) is a multi-purpose commodity classification with the following principal aims:

- (i) to operate as a standard commodity classification whose items can be used for the compilation and analysis of comparable commodity statistics collected (in greater detail) in different ABS statistical series, particularly Australian statistics of domestic production, imports and exports.
- (ii) to improve the comparability of Australian production commodity statistics with equivalent commodity statistics of other countries, compiled in accordance with international standard commodity classifications.
- (iii) to provide a systematic framework and mechanism for achieving, maintaining and improving comparability between equivalent commodity items in different ABS statistical series.

2 The facilities offered by the ASCC will progressively improve the usefulness of Australian commodity statistics for government and private organisations in such applications as analysis of the relationship between employment, industrial structure and tariff provisions, studies of import competition and replacement, submissions to the Industries Assistance Commission, the estimation of market shares, the compilation of input-output tables (see also paragraphs 5 to 7 below) and the conduct of trade and tariff negotiations, e.g. within the framework of GATT (the General Agreement on Tariffs and Trade).

3 The ASCC as it is developed to date goes some way towards meeting the aims mentioned above. However, it is still subject to considerable further long term development. For example, the degree of comparability between equivalent production, import and export commodities as presented in this edition of the ASCC is still rather approximate in a number of cases. This has been due to the fact that to date it has generally only been possible to change a limited number of existing production, import and export commodity items to improve comparability between them.

4 Accordingly, further development of the ASCC, now under way, will concentrate on the development of more homogeneous and useful standard (i.e. ASCC) items of transportable goods by modifying their component import, export and production items (in their respective classifications) with the object, where necessary, of bringing them up to date, improving their usefulness, making them more practical from a collection viewpoint and increasing the degree of comparability between them - the latter for the purpose of sustaining the more homogeneous and useful ASCC items just mentioned.

5 In addition, it is intended, over the longer term, to extend the coverage of the ASCC to all goods and services, to incorporate additional series/classifications such as materials used and commodities in the input-output commodity classification, and to develop alternative broad classification structures for presenting the commodity items in the ASCC. However, some aspects of these longer term developments are expected to receive early attention, e.g. the extension of the ASCC to transport services.

6 The input-output commodity classification, referred to above, is similar to the ASCC in relating commodities locally produced, imported and exported in terms of ASIC industry of origin categories. However, input-output commodity statistics (and the items in accordance with which they are compiled) must relate strictly to ASIC industries of origin, whereas, ASCC items sometimes cover commodities originating from more than one industry. This is because the ASCC items are formed from items in the existing separate classifications of locally produced, imported and exported commodities which, for reasons such as data availability, cannot always be defined in strict industry of origin terms. Thus, on the one hand, ASCC items are specified in terms of the component commodity items defined in the classifications that are related through the ASCC. In so doing the ASCC establishes direct relatability between itself and the component classifications without resort to imputation. Where the practicalities of collection require component commodities to be defined broadly so as to embrace more than one industry of origin, ASCC items may be similarly constrained. On the other hand, the input-output commodity items are specified in strict industry of origin terms. This necessitates classifying or linking some commodities (as defined in particular underlying commodity classifications) to more than one input-output commodity item. This limitation is overcome in practice by allocation of such commodities using special investigations and imputations.

7 Data items in the separate classifications of locally produced, imported and exported commodities will be increasingly defined along industry of origin lines within the framework of the ASCC while maintaining the constraint that data are capable of being collected in those terms. This development will improve the basic data needed for input-output compilations but will not obviate the need for a separate input-output commodity classification. The input-output classification will continue to be maintained for purposes where a strict industry of origin classification is required, and the concordance between it and the ASCC will be expressed in a future edition of the ASCC.

CHANGES IMPLEMENTED IN THIS EDITION OF THE ASCC

8 Commodities originating in the Forestry and Hunting industries are not included in this edition of the ASCC since production statistics for these industries are no longer collected by the ABS.

- General

9 The impact of the ASCC on Australian official statistics of production and overseas trade of transportable goods is outlined below:

- Production

- Commodities originating in ASIC Division A: Agriculture, Forestry, Fishing and Hunting.

10 Approximately 80 agricultural production items are shown in this edition of the ASCC. These are the major individual commodities and commodity groupings for which statistics of value of production are published in the ABS publication "Value of Agricultural Commodities Produced, Australia" (7503.0). The items do not, however, cover all agricultural commodities produced - i.e. there are some "gaps" in the coverage of the production items. (Further information on the reasons for and the nature of the "gaps" is included in paragraph 36.)

11 Thirty-five fishing production items are shown in this edition of the ASCC. They are those for which statistics are published in the ABS publication "Fisheries, Australia" (7603.0). The items do not, however, cover all fishing commodities produced - i.e. there are some "gaps" in the coverage of the production items. (Further information on the reasons for and the nature of the "gaps" is included in paragraph 36.)

- Commodities originating in ASIC Division B: Mining

12 Shown in this edition of the ASCC are approximately 150 mining production items for which statistics of minerals produced are published in the ABS publication "Mineral Production, Australia" (8405.0).

- Commodities originating in ASIC Division C: Manufacturing

13 Statistics are collected for approximately 3,600 items of production in the annual census of manufacturing establishments. The items of production do not, however, cover all manufactured goods - i.e. there are some "gaps" in the coverage of the production items. (Further information on the reasons for and the nature of the "gaps" is included in paragraph 36.) Details of quantity produced and quantity and value of sales and transfers out are collected for these items. However, not all of the measures are collected for all of the items, e.g. for some items details of value of sales and transfers out only are collected. The statistics are published in the ABS publication "Manufacturing Commodities, Principal Articles Produced, Australia" (8303.0) and other ABS publications.

14 In addition, statistics are collected in the monthly and quarterly production collections for approximately 1,200 items. These items are generally identical to items for which statistics are collected in the annual census of manufacturing establishments. However, only details of quantity produced are collected monthly and quarterly. These statistics are published in the monthly "Production Bulletin" publications (8357.0 to 8364.0) and other ABS publications. For periods prior to March 1977, these statistics were published in the "Production Summary" publications (8304.0, 8305.0, 8306.0 and 8308.0 to 8356.0).

15 It should be noted that value statistics collected for manufactured commodities relate to sales and transfers out, while value data compiled for other production commodities referred to above, relate to value of production.

- Imports

16 Import statistics, relating to all goods imported directly for domestic consumption plus goods imported into bonded warehouses, are compiled for the detailed items of the Australian Import Commodity Classification (AICC) (1204.0). The AICC is based on SITC Revision 2 (i.e. the 1974 revision of the SITC). There are approximately 6,500 detailed items in the AICC covering all transportable goods (i.e. non-manufactured goods as well as manufactured goods). The value of imports is compiled for all items and, in addition, quantity of imports is compiled for most of the items. The statistics for detailed commodity items are available monthly through a subscription service operated by the ABS and, in some cases, in ABS publications. Statistics are published annually in the publication "Overseas Trade, Australia, Part 1: Exports and Imports" (5409.0) and in other ABS publications.

- Import Clearances

17 Import clearance statistics, relating to all imported goods cleared through Customs directly for domestic consumption plus imported goods cleared from bonded warehouses for domestic consumption, are compiled for the detailed items of the statistical key in the "Annotated Customs Tariff" (which is issued by the Department of Industry and Commerce (formerly the Department of Business and Consumer Affairs)). There are approximately 12,600 detailed items in the statistical key. The statistical key items have a one to one or a many to one relationship with AICC items. Value of import clearances and duty paid are compiled for all statistical key items and, in addition, quantity of import clearances is compiled for most of the items. The statistics are available monthly through a subscription service operated by the ABS and are published annually, in microfiche form, in the publication "Imports Cleared for Home Consumption, Australia" (5412.0) and in other ABS publications.

- Exports

18 Export statistics are compiled for the detailed items of the

Australian Export Commodity Classification (AECC) (1203.0). The AECC is based on SITC Revision 2 (i.e. the 1974 revision of the SITC). There are approximately 2,500 detailed items in the AECC covering all transportable goods (i.e. non-manufactured transportable goods as well as manufactured goods). Value of exports and gross weight are compiled for items covering all goods and quantity of exports is compiled for most of the items. The statistics for detailed commodity items are available monthly through a subscription service operated by the ABS and, in some cases, in ABS publications. Statistics are published annually in the publication "Overseas Trade, Australia, Part 1: Exports and Imports" (5409.0) and in other ABS publications.

NATURE OF THE ASCC

19 The ASCC is an additional commodity classification, rather than a replacement for any existing classification. Moreover, it integrates the special purpose production, import and export commodity classifications into a mutually consistent system of classifications because the standard commodity items in the ASCC (the most detailed items for which comparable statistics of production, imports and exports can be derived) are formed from the detailed production, import and export items in the existing special purpose classifications. In integrating the special purpose commodity classifications just mentioned into a mutually consistent system of classifications the ASCC performs a standardising role in relation to the continuing production, import and export classifications from which it has been originally derived. The classificatory criteria embodied in the ASCC, together with the application of standard rules and procedures for the coordinated revision of the ASCC and its related classifications, will ensure that the special purpose classifications remain consistent with the ASCC, and that the system as a whole is balanced and as responsive as possible to changing user requirements. Thus production and overseas trade statistics will remain directly comparable at the ASCC level of detail.

STRUCTURE AND MAIN CLASSIFICATION CRITERIA OF THE ASCC

- ASIC Industry of Origin Structure

20 The ASCC, as it has been developed to date, is an "industrial origin commodity classification".

21 In an industrial origin commodity classification, commodities are grouped according to the industries in which they typically originate (i.e. in which they are primarily produced). Thus the broad structure of an industrial origin commodity classification consists of industry of origin headings, and detailed commodity items are shown under each industry of origin heading to cover the types of commodities which originate in the industry. Thus, in an industrial origin commodity classification, each individual commodity item is shown only under one industry heading.

22 In practice of course, many commodities are produced by industries to which they are not primary and an industrial origin commodity classification should therefore not be confused with a cross classification of commodities by industry of production. The latter lists under each industry all the commodities which are actually produced in the industry, so that an individual commodity would be shown under all the industries in which it is actually produced. Commodity statistics should, where appropriate, be interpreted accordingly.

23 The broad structural industry of origin categories in this edition of the ASCC are based on the industries in the 1978 Edition of the Australian Standard Industrial Classification (ASIC) published by the ABS (Volume 1 - The Classification, 1201.0; Volume 2 - Alphabetic Index, 1202.0). Generally each ASCC industry of origin category is equivalent to a class in the ASIC. However, in some cases two or more ASIC classes have been combined for purposes of the ASCC to form a special "combined class", i.e. a single industry of origin category. This has been necessary in cases where many ASCC items each combine commodities originating in two or more ASIC classes. A continuing aim in the further development and maintenance of the ASCC will be to eliminate such combined classes as far as possible by attempting to amend ASIC items such that each ASCC item covers only commodities originating in a single ASIC class.

24 The ASCC industry of origin categories are identified by four-digit code numbers. Where an industry of origin category is equivalent to an industry class in ASIC, the ASCC industry of origin category is identified by the four-digit code number which is used to identify the class in the ASIC. Where an industry of origin category represents a combination of two or more ASIC classes, a four-digit code not used anywhere in the ASIC has been adopted.

25 An example of an ASCC industry of origin category which is equivalent to an ASIC class is class 2115 "Meat (except smallgoods or poultry)". An example of an ASCC industry of origin category which is equivalent to a combination of two ASIC classes is class 2539 "Log Sawmilling and Resawn and Dressed Timber" which is formed by combining ASIC classes 2531 "Log Sawmilling" and 2532 "Resawn and Dressed Timber".

26 The broad structural industry of origin categories in this edition of the ASCC are formed from the ASIC classes in ASIC Divisions A, B and C (except the ASIC classes relating to Forestry, Hunting, Services to Agriculture and Services to Mining). There are 25 relevant ASIC classes in Division A, "Agriculture, Forestry, Fishing and Hunting", 19 of which form separate industry of origin categories in this edition of the ASCC. The remaining 6 ASIC classes in Division A are formed into a special combined class. In Division B "Mining", there are 20 relevant ASIC classes each of which forms a separate broad structural industry of origin category.

27 In Division C, "Manufacturing" there are 173 ASIC classes, 140 of which form separate, broad industry of origin categories in this edition

of the ASCC. The remaining 33 ASIC classes in Division C are formed into 12 special combined classes.

28 There are thus a total of 192 broad structural industry of origin categories in this edition of the ASCC.

- Correspondence with SITC

29 It is a basic aim in the development of the ASCC to ensure that as far as possible ASCC items are defined in accordance with the commodity definitions in the SITC. This means that when ASCC items are amended or redefined every effort will be made to ensure that each ASCC item will correspond to a single detailed item in the SITC, or a part of a single detailed SITC item.

30 The SITC has a one to one correspondence, at the detailed item level, with the headings and statistical subheadings of the Customs Cooperation Council Nomenclature (CCCN) - which was formerly known as the Brussels Tariff Nomenclature (BTN). The SITC and the CCCN are widely known and widely used throughout the world as a basis for other commodity classifications, and are supported by extensive definitional material in the CCCN Explanatory Notes.

STANDARD COMMODITY ITEMS OF THE ASCC

- General

31 Standard (ASCC) items as contained in this manual have been formed from detailed production, import (AICC) and export (AECC) items and represent the most detailed common groupings of production, import and export items. Thus ASCC item 2341.10, "Cotton seeds" has as its components:

. Production item:

212.16 Cotton seed

. AICC item:

222.30.00 Cotton seeds

. AECC item:

222.30.00 Cotton seeds

32 However, in a large number of cases standard (ASCC) items are more broadly defined so that each one covers a number of production, AICC and AECC commodity items. For example, ASCC item 3169.40 "Tubing and piping, flexible, of base metal" has as its components the following items:

. Production items:

- 469.11 Flexible metal tubing (ferrous and non-ferrous), covered or lined
- 469.13 Flexible metal tubing (ferrous and non-ferrous), not covered or lined

. AICC items:

Flexible tubing and piping, of base metal:

- 699.61.01 - Interlock type
- 699.61.03 - Square-lock type
- 699.61.05 - Corrugated (convoluted) type
 - Bellows, expansion joint:
- 699.61.07 - - Not exceeding 152 mm internal diameter
- 699.61.11 - - Other
- 699.61.19 - Other (including wholly or essentially of spirally wound wire)

. ABCC item:

- 699.61.00 Flexible tubing and piping, of base metal

33 It should be noted in both examples above that the standard (ASCC) items represent the MOST DETAILED COMMON GROUPING of production, AICC and ABCC items - i.e. both are the most detailed items for which comparable statistics of production, imports and exports can be derived.

- Six-Digit ASCC Items

34 ASCC items which represent the most detailed common groupings of "PRODUCTION, AICC AND ABCC" items are identified by six-digit code numbers (the first four digits of which represent the ASCC broad structural categories under which the ASCC items are shown). There are 1059 six-digit ASCC items in this edition of the ASCC.

- Eight-Digit ASCC Items

35 In many cases an ASCC item representing the most detailed common grouping of "PRODUCTION, AICC AND ABCC" items (i.e. a six-digit ASCC item) can be subdivided into more detailed categories representing the most detailed common groupings of "PRODUCTION AND AICC" items or of "PRODUCTION AND ABCC" items. In these cases, further ASCC items have been formed representing the more detailed categories, and such ASCC items are identified by eight-digit code numbers (the first six digits of which represent the code number of the six-digit ASCC item). For example, ASCC item 2190.15 "Cut Tobacco" (which represents the most detailed common grouping of production, AICC and ABCC items) is subdivided into ASCC items 2190.15.05

"Cigarette Tobacco" and 2190.15.10 "Pipe Tobacco" (which represent the most detailed common groupings of production and AICC items). In this edition of the ASCC, 269 of the 1059 six-digit items are further subdivided to form 868 eight-digit items representing more detailed common groupings of production and AICC items or production and AECC items.

. Two hundred and twenty of the 1059 six-digit items are subdivided to form 741 eight-digit items representing more detailed common groupings of production and AICC items, thus giving a total of 1580 separate ASCC items permitting comparisons between production and imports (however some of these ASCC items have "partial" or "complete production gaps" as explained below).

. Forty-nine of the 1059 six-digit items are subdivided to form 127 eight-digit items representing more detailed common groupings of production and AECC items, thus giving a total of 1137 separate ASCC items permitting comparisons between production and exports (however some of these ASCC items have "partial" or "complete production gaps" as explained below).

- Production Gap Situations

36 It was mentioned earlier that the production commodity items do not cover all transportable goods originating in ASIC Divisions A "Agriculture, Forestry, Fishing and Hunting", B "Mining" and C "Manufacturing" - i.e. there are "gaps" in the coverage of the production items. In the case of manufacturing production commodity items, in a sense there are no "gaps" in the coverage because at the end of the list of manufacturing commodity items there are items 999.91 and 999.92 for "All other articles" which, of course, make the list exhaustive of all manufactured goods. However, these items cover such a miscellaneous, diverse range of commodities that they have been disregarded for purposes of the ASCC, i.e. they have not been shown as component production items of any ASCC items and thus, to this extent, production statistics compiled according to the ASCC will be incomplete. In addition there are a small number of other manufacturing production items which each cover a wide range of commodities and which have also been disregarded for purposes of the ASCC, e.g. manufacturing production item 980.12 "Other food products". In the case of agricultural, fishing and mining commodities, all existing production items are shown in this edition of the ASCC. However, "gaps" are present and these generally fall into two categories. First there are cases where Australian production items have not been established because Australian production for these items is not significant. Examples are production from snake farms and production of natural sponges. The second category covers commodities for which there is overseas trade but for which, due to climatic, technological or other factors, there is no Australian production and therefore no Australian production items. Examples of these are production of natural rubber and of black coal briquettes.

37 The existence of "gaps" in the coverage of the production items means that, for some ASCC items, some or all of the commodities covered by the ASCC items are not included in specific production items. Where this occurs the ASCC items have "production gaps". In the case where all of the commodities covered by the ASCC item are not included in specific production items (i.e. in the case of a "complete production gap"), a note to indicate this is shown under the ASCC item title in the "Component Production Item(s)" column in the "Detailed Classification" (Part 2), of this manual, e.g. in the case of ASCC item 2176.70. In the case where only some of the commodities covered by the ASCC item are not included in specific production items (i.e. in the case of a "partial production gap"), a footnote to indicate this is referred to after the last component production item shown under the ASCC item, e.g. footnote (a) after production item 063.31 under ASCC item 2187.00.

- Surplus and Deficiency Situations

38 In many instances an ASCC item has been formed without there being an exact matching between the component production, AICC and AECC items. This has been done in instances where it is considered that the matching, while not exact, is probably good enough for most working purposes. This approach has enabled the formation of more useful ASCC items than would be the case if ASCC items had been formed only at broader levels where exact matches could be obtained between production, AICC and AECC items.

39 The formation of ASCC items without exact matches between the component production, AICC and AECC items implies that, for such ASCC items, the component production, AICC and/or AECC items cover a wider or narrower range of commodities than is covered by the ASCC item. The surpluses and deficiencies in the range of commodities covered by a set of component production, AICC or AECC items are indicated in footnotes in the "Detailed Classification" (Part 2), of this manual. Examples are:

. Footnote (a) (a "deficiency footnote"), referred to after the last component AECC item shown under ASCC item 2163.00 "Biscuits, ice cream cones and wafers", which indicates that the component AECC items do not cover biscuits put up as confectionery, which are relevant to ASCC item 2163.00 (and that these commodities are included in AECC item 048.42.19 which is a component of ASCC item 2162.00).

. Corresponding to this, footnote (d) (a "surplus footnote"), shown against AECC item 048.42.19 under ASCC item 2162.00 which indicates, inter alia, that the AECC item includes biscuits put up as confectionery, which are not relevant to ASCC item 2162.00.

40 In a small number of cases ASCC items have been formed with "complete" production, import or export deficiencies. This has been done only in instances where the deficiency is thought to be negligible in terms of value, and, particularly, where it seems to be advantageous to have the deficiency in order to be able to devise an ASCC item which fits better into the ASIC industry of origin structure. Examples are:

. ASCC item 1112.00, which has a complete import deficiency (indicated by footnote (a)).

. ASCC item 2161.00, which has a complete export deficiency (indicated by footnote (d)).

- Duplication in ASCC Item Contents

41 It is generally undesirable for a single ASCC item which includes the materials or parts that might be used in making a particular type of good, to include also the complete good. This is so because such an ASCC item could involve "duplication" in the sense that, for instance, components could be covered by the production and import statistics and completed goods made from the components could also be covered by the production statistics. In this situation, the meaningfulness of assessments of the degree of import competition, apparent market supplies and export performance, based on the production, import and export statistics for the ASCC item, is questionable.

42 For this reason, in cases where it has not been possible to form separate ASCC items for materials and components, on the one hand, and completed goods of the type made from those materials and components, on the other hand, a "duplication footnote" has generally been shown against the ASCC item which covers both the materials and components and the completed goods, pointing out the duplication and suggesting that caution should be exercised when comparing details of production and overseas trade for the ASCC item, e.g. footnote (a) shown against ASCC item 2140.34 in the "Detailed Classification" (Part 2), of this manual.

43 It is an aim in the further development of the ASCC to eliminate the remaining duplication situations as far as possible, i.e. to form separate ASCC items for materials and components, on the one hand, and completed goods, on the other hand, as far as possible.

- Out of Class and Class Omission Situations

44 In general each ASCC item is wholly primary to the broad structural industry category under which it is listed. However, in some cases, an ASCC item is partially primary to an industry other than the one under which it is listed, e.g. ASCC item 2122.20 "Casein, caseinates and other casein derivatives; casein glues" which covers the following commodities:

. Casein, caseinates and other casein derivatives (except casein adhesives and glues), which are primary to class 2122 (i.e. the class under which ASCC item 2122.20 is listed).

. Casein adhesives and glues, which are primary to class 2768.

This has been termed an "out of class" situation and is indicated, in this instance, by the out of class footnote, "(a)", shown against ASCC item 2122.20 in the "Detailed Classification" (Part 2), of this manual.

45 Corresponding to each "out of class" situation there is, in general, a situation where some of the commodities primary to a class are not covered by the ASCC items listed under the class. For example, casein glues, which are primary to class 2768, are not included in any ASCC item listed under that class. This has been termed a "class omission" situation, and is indicated, in this instance, by the class omission note shown immediately after the description of the industry of origin category for class 2768 in the "Detailed Classification" (Part 2), of this manual.

46 It is an aim in the further development and maintenance of the ASCC to eliminate the remaining out of class and class omission situations as far as possible by attempting to change commodity items in such a way that each ASCC item will cover only commodities that are primary to a single ASIC class.

- Suitability of ASCC Items for Commodity Statistics in Terms of Quantities

47 It is not possible to compare production and overseas trade in terms of quantities for many ASCC items, either because quantity details are not (in many cases, cannot meaningfully be) compiled for all of the component production, AICC and AECC items, or because different units of quantity are used for different component items in the different series. Accordingly, the emphasis in the development of the ASCC so far has of necessity been on the formation of ASCC items providing for the comparison of production and overseas trade in terms of values. This fact has affected the way in which ASCC items have been defined in some instances, as explained in the following paragraph.

48 For purposes of determining the most detailed common groupings of production, AICC and AECC items for formation as ASCC items, those production and AECC items for which value data are not compiled (i.e. items for which only quantity data are compiled) had to be disregarded. For instance, with regard to production items, in the formation of ASCC item 3243.00 "Locomotives, railway rolling stock, trams, trolley cars and parts thereof; hovertrains", the only production items which could be taken into account are 571.10 "Railway and tramway rolling stock (details of units actually completed during the year, including complete units assembled partly or wholly from purchased components)" and 578.11 "Forged tyres and wheels of iron or steel". All the other production items shown as components of ASCC item 3243.00 (such as 571.11 "Electric locomotives") are dissections of item 571.10 for which the values of sales and transfers out are not collected and compiled - the values of sales and transfers out for these component items of item 571.10 are included in production item 571.10. For this reason more detailed ASCC items could not have been formed for these "narrower" commodities as might otherwise have been possible.

49 In conjunction with further development of the ASCC it is proposed to give attention to units of quantity, with the aim of having identical units of quantity for all the component production, AICC and AECC items of an individual ASCC item, as far as practicable.

- Treatment of Waste and Scrap

50 Waste and scrap as such are covered by the ASCC in some cases but not in others. Waste and scrap occur in two ways: firstly, waste and scrap occur as by-products of production processes (e.g. sawdust), and secondly, waste and scrap occur through wear and tear or obsolescence (e.g. clothes discarded because they have become worn out or because they have gone out of fashion). Waste and scrap occurring in the second way (i.e. wear or obsolescence) are not covered by the ASCC, and waste and scrap occurring in the first way (i.e. as a by-product of a productive process) are covered generally only if there are production items.

- Treatment of Used or Secondhand Goods

51 Used or secondhand goods as such are not covered by the ASCC. (In cases where AICC and AECC items cover both new and used goods, for purposes of the ASCC the actual imports or exports of used goods is assumed to be negligible.)

- Treatment of Commodities and Transactions Not Included in Merchandise Trade

52 Commodities and transactions not included in merchandise trade (i.e. Section 9(b) in the AICC and AECC) are also not covered by the ASCC.

STRATEGY FOR DEVELOPMENT AND MAINTENANCE OF THE ASCC

53 The initial development of the ASCC has involved the matching of existing production, AICC and AECC items (or groupings of items) of manufactured goods to form ASCC items, with, generally, very little change having been made to individual production, AICC or AECC items to achieve a better correspondence between them. The ASCC items formed in this way have then been shown under appropriate ASIC industry of origin categories.

54 The ABS has a programme of regular maintenance of the ASCC, as developed to date, to cover the following:

- . to deal with proposals for changing ASCC items;
- . to ensure that proposed ad hoc changes to production, AICC and AECC items are made in a manner consistent with the ASCC; and
- . to regularly publish up to date editions of the ASCC. (This ASCC manual is the first to be published in a loose leaf folder, and provides the base copy for future annual revisions which will be issued in the form of replacement pages. This ASCC manual shows items used in the compilation of production, import and export statistics for 1980-81.)

55 As already adverted to, the ABS has also instituted a continuing programme aimed at further developing and improving the Classification. This will involve changing production, AICC and AECC items to improve the correspondence between them and thereby enable more useful and detailed ASCC items to be incorporated in the Classification. In pursuing this programme the aim will be to ensure, within the constraints imposed by the ability of respondents to supply data and the ability of the ABS to process and disseminate the data, that the following objectives are met:

- . that each ASCC item (together with its component production, AICC and AECC items) will include only goods primary to a single ASIC four-digit class;
- . that each ASCC item will correspond at least to a single SITC five-digit item (or part of such an item); and
- . that the ASCC items will provide for comparable production and overseas trade statistics in the degree of detail required by users of such statistics.

56 Also, as mentioned earlier, it is proposed in conjunction with further development of the ASCC to aim for identical units of quantity, as far as practicable, for all component production, AICC and AECC items of an individual ASCC item, to facilitate comparison of production and overseas trade statistics in terms of quantities.

STATISTICS CLASSIFIED ACCORDING TO THE ASCC

57 For the past three years the ABS has published annual commodity bulletins of production and overseas trade commodity statistics classified according to the ASCC. These publications entitled "Comparable Commodity Statistics of Production, Imports and Exports, Australia" (Catalogue Nos 1310.0 and 1312.0) demonstrated the practical use of the ASCC and illustrated in quantitative terms the comparability that existed between production and trade commodity items. However, due to changing priorities and a decline in the perceived demand for these publications, they will no longer be produced by the ABS. The last edition of the Comparable Commodity Statistics publication for goods originating in Agriculture and Mining Industries (Catalogue 1312.0), relating to the year 1979-80, was issued in November 1982, and the final edition of the publication relating to goods originating in Manufacturing Industries (Catalogue No 1310.0), relating to the year 1979-80, will be issued in April 1983.

58 Users who wish to compile comparable commodity statistics may do so by referring to ABS publications which include statistics of the relevant production series, (e.g. "Value of Agricultural Commodities Produced, Australia" (7503.0); "Fisheries, Australia" (7603.0); "Mineral Production, Australia" (8405.0); "Manufacturing Commodities, Principal Articles Produced, Australia" (8303.0)) and those which include statistics on overseas trade commodities (e.g. "Overseas Trade, Part 1: Exports and Imports" (5409.0)). Confidentiality of statistics will need to be treated in the manner outlined in the Explanatory Notes of publications 1310.0 and 1312.0.

FACTORS AFFECTING COMPARISONS OF PRODUCTION AND OVERSEAS TRADE COMMODITY STATISTICS

59 In using the ASCC for compiling comparable commodity statistics of imports, exports and Australian production a number of factors should be taken into account which can, depending on the nature of the analysis being undertaken, variously affect the comparability of the data. These factors could be viewed as falling into basically the following two categories:

- . Problems of classification.
- . Other problems.

60 The problems in the first category relate to situations in the ASCC where it has not yet been possible to introduce full comparability between equivalent items of imports, exports and production, or where there are other deficiencies in the manner in which commodity items are defined in the ASCC and its related classifications. These matters have been discussed in earlier parts of the Introduction and further development of the ASCC is in large part directed at eliminating or at least reducing these kinds of problems.

61 The problems in the second category relate mainly to issues of measurement, collection of the data, etc., i.e. matters which cannot usually be solved by altering the ASCC or its related classifications. The main kinds of problems or difficulties involved would include the following:

- . Difficulties due to the use of different bases of valuation of production, imports and exports, particularly in connection with transport and installation costs, customs and excise duties and merchants' margins.
- . Difficulties due to timing factors, e.g. lags between imports and re-exports, or production and exports, or imports and import clearances. Leads and lags of this type can be aggravated by irregular and significant build ups or run downs of stocks by producers or merchants or both.
- . Difficulties due to limitations in the scope or coverage of statistical collections which are the source of the data being compiled according to the ASCC, e.g. lack of data on sales of commodities produced by manufacturing establishments on commission for non-manufacturing establishments, and of production of manufactured goods by non-manufacturing establishments.
- . Difficulties due to lack of detail in the collection of data on non-merchandise trade, and ships' and aircraft stores. (This difficulty might also be regarded as a classification-type problem.)
- . Difficulties in making comparisons due to such factors as differences in quality, material composition, substitutability of commodities, variations in the import component of goods produced in Australia or exported from Australia, etc.
- . Difficulties in comparing commodity statistics over time due to periodic (annual) changes in the ASCC and its related commodity classifications. Such changes are unavoidable if the classifications

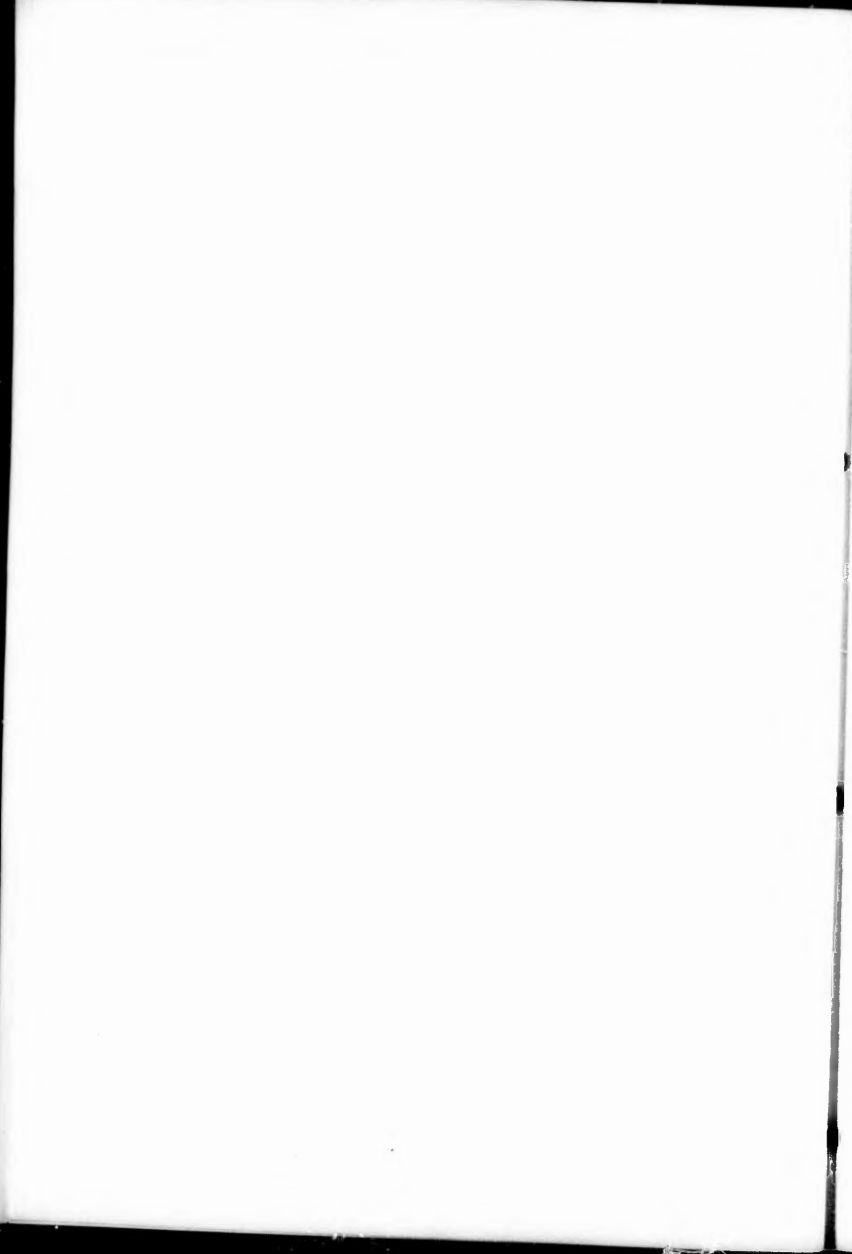

and the data collected in accordance with them are to reflect the evolving requirements of users for up to data commodity statistics, both in terms of current technology and analytical requirements.

62 Some of the difficulties mentioned above, especially those of valuation, would not arise if it were possible to collect and compile comparable statistics in terms of quantities rather than values. However, even in the most favourable of circumstances, it would not be realistic to expect that all commodity items in the ASCC and its related classifications could be defined in such a narrow way that it would be meaningful in all cases to compare production and overseas trade commodity statistics in terms of quantities only.

63 Nevertheless, in instances where the possibility exists to compare production and overseas trade commodity statistics in terms of standard units of quantity, some timing difficulties could be avoided by using, in the case of annual production commodity statistics, "quantity of sales and transfers out" rather than "quantity produced" for comparison with imports and/or exports.

64 As mentioned earlier in the Introduction, attention will be paid during the further development of the ASCC to increasing the usage of standard units of quantity for the component production, import and export commodity items of ASCC items.

**BROAD STRUCTURE OF
THE ASCC**

BROAD STRUCTURE OF THE ASCC

As explained in the Introduction the ASCC is an "industrial origin commodity classification". This means that the broadest or the most summary level of the classification consists of headings which represent the industries in which the commodities shown in this classification typically originate. i.e. in which they are normally produced.

These industry of origin headings or categories are listed below. They constitute the broad structure of the ASCC.

In general, each industry of origin heading or category in the ASCC is equivalent to a class in the Australian Standard Industrial Classification (ASIC). Where this occurs the code of the "industry of origin" and of the corresponding ASIC class is identical. However, in some cases two or more ASIC classes have been combined for purposes of the ASCC to form a special "combined class", i.e. a single industry of origin. Where this has occurred the "combined class" has been given a unique code not used anywhere in the ASIC, and cases of this type are easily identifiable because two or more "corresponding ASIC class codes" have been shown against the industry of origin title.

SUMMARY CLASSIFICATION

SUMMARY CLASSIFICATION

The most detailed commodity categories in terms of which it is possible to compare statistics of commodity imports, exports and domestic production are represented by the 6 and 8 digit standard commodity items in this Classification. These items are usually referred to as ASCC items and are listed in the table below under the industry of origin (class) headings which constitute the broad structure of the ASCC as described in the preceding Section of this Manual.

In the second Part of this Manual, i.e. the Section which contains the detailed Classification, the 6 and 8 digit ASCC items are further explained in terms of their component import, export and production commodity items, i.e. the items in accordance with which the actual import, export and production commodity statistics are collected and/or compiled by the ABS. The detailed Classification also identifies, in footnotes, each instance where an ASCC item is in some way deficient or imperfect - the general nature of the most common types of deficiencies or imperfections of ASCC items is, of course, also discussed in the Introduction. It should therefore be noted that the descriptions of the ASCC items as listed below present only a summary definition of their contents. To obtain a complete definition of the items and their contents, reference should be made to the detailed Classification.

At this point attention is again drawn to the fact, explained in the Introduction, that 6 digit ASCC items generally permit comparisons between commodity statistics of production, imports and exports whereas 8 digit ASCC items only permit comparisons of commodity statistics between either production and imports OR production and exports. In the Section containing the detailed Classification it is easy to determine whether an 8 digit ASCC item permits comparisons between either production and import commodity statistics OR production and export commodity statistics by reference to the component import and export items of the ASCC item. This method cannot be used in the table below. Instead each 8 digit ASCC item which permits comparisons between production and import statistics has been assigned the letter "I" in the right hand margin of the table and each 8 digit ASCC item which permits comparisons between production and export statistics has been assigned the letter "E" in the right hand margin of the table.

DIVISION C - MANUFACTURING - contdCLASS 564 - METAL COATING AND FINISHING

This ABSC industry of origin has been created separately with no ABSC items listed under it because:

- (i) separate, specific, information is not available on the commodities which originate only from industry class 564 thereby preventing the creation of meaningful and value-added items for these commodities;
- (ii) the ABSC, at present, relates only to transportable goods, and a major proportion of the activities primary to this industry is involved in the provision of services (e.g. engraving, polishing, plating and heat treatment of metals);
- (iii) the creation of this separate industry of origin category permits the presentation of standardised commodity items for the other important metal industry classes.

CLASS 565 - NON-FERROUS STREAM, GAS AND WATER FITTINGS

406.54	2754.37
408.70	2754.08
408.73	2754.37

(C) See footnote (b) in ASCC item 2342.35.

(D) See footnote (b) in ASCC item 2539.10.

(E) See footnote (c) in ASCC item 2539.10.

(F) This production item is not shown under any ASCC item in this edition of the ASCC. Though it covers commodities primary to ASIC division C "Manufacturing", these commodities are diverse in nature and are relevant to many ASCC items. Therefore they have been treated as though they are not covered by specific production items.

(G) This production item is not shown under any ASCC item in this edition of the ASCC. The commodities covered by it originate from several industries of origin and the lack of separate and specific information on them prevented the creation of viable standard (ASCC) items.

(H) This production item is not shown under any ASCC item in this edition of the ASCC. It covers commodities which are primary to ASIC division E "Construction" and which are not relevant to any ASCC item in this edition of the ASCC.

(I) See footnote (b) in ASCC item 2941.41.10.

(J) See footnote (a) in ASCC item 3163.05.05.

(K) This production item is not shown under any ASCC item in this edition of the ASCC. It covers commodities which are primary to ASIC division D "Electricity, Gas and Water" and which are not relevant to any ASCC item in this edition of the ASCC.
